Project: Banking Project

Introduction / Overview

Overview

The Guru99 Banking Project is a web-based online banking application that enables customers and bank managers to perform banking operations securely. The system provides different permissions for Manager and Customer roles. Managers can manage customers, accounts, deposits, withdrawals, and fund transfers, while customers can perform self-service banking operations such as balance inquiry, fund transfer, password change, and account statement viewing. This test plan covers the verification of all functional requirements defined in the Software Requirements Specification (SRS).

In Scope

The following testing activities are included:

- Functional Testing
- User Interface Validation
- Input Field Validation
- Business Rule Validation
- External Interface Testing
- Integration Testing
- Regression Testing
- Smoke Testing
- Sanity Testing
- Cross-Browser Testing (Chrome v27 and above)
- Role-based Access Testing (Manager and Customer)
- Error Message Validation

Modules included:

- Login / Logout
 - New Customer
 - Edit Customer
 - Delete Customer
 - New Account
 - Edit Account
 - Delete Account
 - Deposit
 - Withdrawal
 - Fund Transfer
 - Balance Enquiry
 - Mini Statement
 - Customized Statement
 - Change Password
-

Out of Scope

According to the SRS, the following are excluded:

- Performance Testing
 - Stress Testing
 - Load Testing
 - Automation Testing
 - Security Penetration Testing
 - Mobile Application Testing
 - Compatibility with browsers other than Chrome 27+
-

Team / Stakeholders

Role	Responsibility
Project Sponsor	Project Approval
Project Manager	Project Planning
Business Analyst	Requirements

Development Team	Software Development
QA Team	Test Planning, Test Execution
Lead QA Engineer	Test Review
End Users	User Acceptance Testing

Test Plan Objective / Purpose

To verify that the Guru99 Banking application satisfies all functional requirements, business rules, and validation rules defined in the SRS while ensuring the application is reliable, stable, and ready for release.

Goals

- Verify every functional requirement.
 - Validate all input fields.
 - Ensure Manager permissions work correctly.
 - Ensure Customer permissions work correctly.
 - Verify business rules.
 - Detecting defects before production.
 - Ensure system stability.
-

Objectives

- Validate all banking modules.
- Verify positive, negative, and boundary scenarios.
- Verify role-based access.
- Validate error handling.
- Ensure correct database transactions.
- Verify user interface behavior.
- Verify browser compatibility.

Test Strategy

The project will follow a risk-based manual testing approach.

Testing activities include:

- Requirement Review
 - Test Planning
 - Test Case Design
 - Test Data Preparation
 - Environment Setup
 - Smoke Testing
 - Functional Testing
 - Integration Testing
 - Regression Testing
 - Bug Reporting
 - Retesting
 - Test Closure
-

Types of Testing

Functional Testing

- Login
- Customer Management
- Account Management
- Transactions
- Statements
- Password Management

Smoke Testing

Verify critical features before detailed testing.

Sanity Testing

Verify fixed defects.

Regression Testing

Ensure new fixes do not break existing functionality.

Integration Testing

Verify interactions between modules.

User Interface Testing

Validate forms, buttons, labels, navigation.

Validation Testing

Verify all field validation rules defined in the SRS.

Compatibility Testing

Chrome Version 27 and above.

Test Environments

Environment	Purpose
Development	Initial testing
QA	Functional Testing
Staging	Pre-production validation
Production	Final verification after deployment

Browser / Device Matrix

Platform	Operating System	Browser	Version
Desktop	Windows 10	Chrome	27+

Desktop	Windows 11	Chrome	Latest
Desktop	macOS	Chrome	Latest

Android
& IOS

Test Items

The following modules will be tested.

Authentication

- Login
 - Logout
 - Password Change
-

Customer Management

- New Customer
 - Edit Customer
 - Delete Customer
-

Account Management

- New Account
 - Edit Account
 - Delete Account
-

Banking Transactions

- Deposit
 - Withdrawal
 - Fund Transfer
-

Account Services

- Balance Enquiry
 - Mini Statement
 - Customized Statement
-

Input Validation

Validation of:

- Customer Name
 - Email
 - Phone Number
 - PIN
 - Customer ID
 - Account Number
 - Amount
 - Password
 - Dates
-

Test Deliverables

The QA team will produce:

- Test Plan
- Test Scenarios
- Test Cases
- Test Data
- Requirement Traceability Matrix (RTM)
- Defect Reports

- Daily Test Execution Report
 - Test Summary Report
 - Test Closure Report
 - Bug Screenshots
 - Execution Logs
-

Test Schedule

Activity	Duration
Requirement Review	2 Days
Test Planning	2 Days
Test Case Design	6 Days
Test Data Preparation	2 Days
Environment Setup	2 Days
Smoke Testing	1 Day
Functional Testing	10 Days
Integration Testing	4 Days
Regression Testing	4 Days
Bug Retesting	3 Days
UAT Support	3 Days
Test Closure	1 Day

Estimated Total Duration:

39 Working Days

Risks and Mitigations

Risk	Impact	Mitigation
Changing Requirements	High	Requirement review meetings
Environment Unavailable	High	Maintain backup environment
Delayed Development	High	Re-plan testing schedule
Invalid Test Data	Medium	Prepare verified test data
High Number of Defects	High	Risk-based testing
Browser Compatibility Issues	Medium	Early compatibility testing

Test Case Example

Test Case ID

TC_LOGIN_001

Test Case Title

Verify successful login using valid Manager credentials.

Objective

Verify that a Manager can log in successfully using valid credentials.

Preconditions

- Application is available.
 - Manager account exists.
 - User is on Login page.
-

Test Steps

Step	Action
1	Open Guru99 Banking application
2	Enter valid User ID
3	Enter valid Password
4	Click Login

Expected Result

- Login is successful.
 - Manager dashboard is displayed.
 - User is redirected to the home page.
-

Actual Result

(To be filled during execution)

Status

(To be filled during execution)

Assumptions

- Test environment is available.
 - Test accounts are created.
 - Database is accessible.
 - Stable application build is provided.
 - Chrome browser version 27 or later is installed.
-

Entry Criteria

- SRS approved.
 - Application build deployed.
 - Test environment ready.
 - Test data available.
 - Test cases reviewed and approved.
-

Exit Criteria

Testing will be completed when:

- All planned test cases are executed.
 - All Critical defects are closed.
 - High severity defects are resolved or accepted.
 - Test Summary Report is approved.
 - Stakeholder approval is received.
-
